2.0 PURPOSE OF THIS DOCUMENT

This document lists frequencies that are critical to EMRG operation in an emergency, to facilitate quick decisions about frequency use. The document focuses on frequencies that require some special knowledge or where there is more than one option, so choices are prioritized.

Current repeater listings can be obtained from the Saint Lawrence Valley Repeater Council (SLVRC) web site (<http://db.slvrc.org/>). EMRG saves the SLVRC database report as a PDF file and posts it as document;

Frequencies of other services that may be of use may be found in
EMRG-206 Auxiliary Frequency Information

3.0 FREQUENCY ASSIGNMENTS

3.1 LIST FORMAT

- EMRG encourages the use of an input CTCSS tone, even if the repeater does not require it. This is useful when someone switches from the repeater output frequency with CTCSS, to listen to the input frequency. The CTCSS decode will still be active, so if the person transmitting is not sending the CTCSS tone, nothing will be heard on by the person listening on the input.
- The frequencies represent the entries that would be made in the end user radio.
